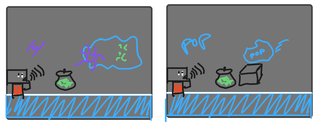
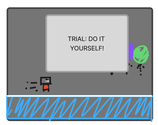
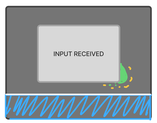
PHONEME BLENDING (CVC) PROTOTYPE

PHONOLOGICAL AWARENESS DOMAIN

LEARNING



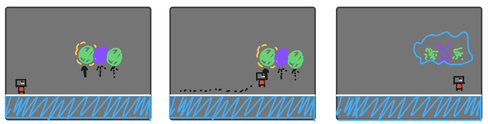




Rewards : could be attaining a key to open a door, multiple keys for multiple locks on a door, gold, increased score, whatever...

Mike Jensen

Player lands in LEARNING room → Player is inclined to walk towards glowing orbs → interacts with glowing orbs



orb cluster pops and engages "bullet time" via voice over:
- Explains that by interacting with object (popping bubble cluster), each bubble releases its magical sound waves (sounds are audible)
- Explains that the bubbles are clustered together to make a word
- Explains that sounds and word need to be captured by saying each sound and then blending to make a word.

Phonics lesson presented...
via voice over:
- Explains that player's previous skills of capturing letter sounds will help them to recognize and call the word

via animation:
- bubbles pop sequentially
- /p/, /o/, and /p/ produced and sound waves captured
- Sounds blended to say "pop" and word captured

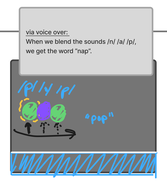
Player Attempts exercise by giving input

- Pass → play resumes at regular speed → player gets reward
- Fail Type 1: No Call (times out) → Feedback/Instruction

- Re-conduct baseline test for phoneme articulation / mic input
- Fail Type 2: Miscall → Feedback/Instruction

Different feedback paths because time out might be due to lack of comprehension of task/concept... so replaying instructions would probably be important
But for player who understood directions yet failed to give correct response, don't want to wear them down with explicit instruction.

togata



Designated animations for failure feedback :
- If you get a phoneme wrong the thing you collect doesn't fit into a receptacle
- respond to the response to help them identify what they did wrong not just the right answer.
  - you say the wrong phoneme
  - or you time out

Mike Jensen

This is an EXPRESSIVE type of exercise.

Mike Jensen

Learning Phase Telemetrics
Within Trials:
- Time to input
  - Time to each cluster pop
  - Time to articulation for each sound
  - Time to articulation of word
- Success/Failure
  - Type of failure
    - Sound miscall(s)
    - Word miscall
    - Time out

togata

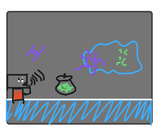
Learning Phase Telemetrics
Between Trials:
- Average time to input
- Average time to articulation
- Number of failures
  - # of sound miscalls
  - # of word miscalls
  - # of time outs

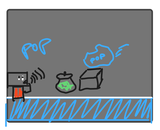
togata

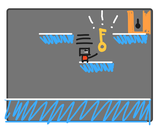
PRACTICING

PRACTICE allows for unlimited attempts of exercise with quick pass/fail feedback mechanism. This is the "main part of the level"

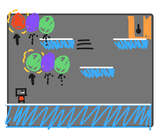
Mike Jensen

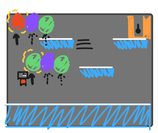


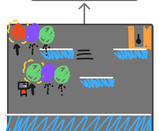




Player lands in PRACTICE room → Player tries to get through DOOR, but needs a KEY → interacts with glowing orb cluster → orb cluster shatters and engages "bullet time" → Phonics PRACTICE presented







- Pass → play resumes at regular speed → Repeat for each blending practice → Player gets KEY → Player can progress
- Fail → Feedback/Instruction

In PRACTICE mode feedback is just a failure with an opportunity to try again after modeling the correct answer.

Mike Jensen

Practice Phase Telemetrics
Within Map:
- Sequence of letters interacted with
- Time to input
  - Time to bubble pop
  - Time to articulation
- Success/Failure
  - Type of failure (time out or miscall)
    - If possible, the miscall
